

## Powers Carbon Emissions 2018 - 2022

	2018 Emissions kg CO2e	2019 Emissions kg CO2e	2020 Emissions kg CO2e	2021 Emissions kg CO2e	2022 Emissions kg CO2e
Total Scope 1 Emissions - fleet cars	25,594	21,094	19,279	15,139	9,721
Total Scope 2 Emissions - Energy Consumption	3,740	3,663	3,666	3,968	3,421
Total Scope 3 - Indirect Emissions	1,463	1,439	775	1,109	1,084
<b>Total Emissions</b>	<b>30,797</b>	<b>26,196</b>	<b>23,720</b>	<b>20,216</b>	<b>14,226</b>

- Powers have been tracking their carbon emissions since 2014. In the table above you can see our carbon emissions for the last five years.
- All scope one to three emissions are converted to kg CO2e so that they can be added together.
- The last five years of carbon emissions show a reduction in the company's overall carbon footprint from 33,775 kg CO2e to 20,216 kg CO2e. That's a reduction of 40%!
- This has been largely due to replacing high emission cars with low emission cars and in some cases we've leased or purchased fully electric vehicles.
- We're on a mission to reduce this even further and have got big plans for the future. Watch this space to find out what we're doing.
